## Tools required:

Drill/Screwdriver

Mallet

## Tools included:

17mm Wrench

T25 Torx bit

**Step 1** Assemble the **S1/S3** frames to make up the main structure using **CB1** brackets for the corners and **JF1** brackets for the straight joints. Complete the structure with the **P1** Post and the **ST5** tie bar.

Please note 1.5" Tec Screws are for roof panels only

MEASURE THE WIDTH AND DEPTH OF THE SHELTER TO CHECK CORRECT ALIGNMENT.

**Step 2** Attach **DR** Brackets to the top of the frames, and bolt the **DR2R** rafters in place through the brackets. The infill panels **DR2I** must be placed into position at the same time as the end rafters and are screwed in using 1.5" Tech screws.

**Step 3** Align the **DR2PO** roof panels with the outer roof rafters and equally space the **DR2PI** panel in the middle. Then use the DRATO and DRATI angles to attach the bottom of the panels with 1.5" Tech screws.

**Step 4** Attach the **FT1** and **FT3** foot brackets to the frames. Make sure the shelter is square and in its desired position before using the anchor bolts to fix it to the the ground. Screw down the **DR2T** directly into the rafters as shown below, using 1.5" Tech screws.

# THANK YOU FOR PURCHASING THIS PRODUCT

## **MAINTENANCE:**

To ensure your products give you many years of use we recommend that you:

- Clean panels regularly with soapy water
- Ensure all fittings are tight (for example after a big storm)
- Touch up any exposed metal should it get scratched
