Image						

Step 1 Assemble **S1** frames to make up the main structure using **CB1** brackets in the corners and **JF1** brackets on the straight joints. Attach the **S1 stub** as shown using **JF1**, **CF1** and **JF3** brackets.

Step 2 Attach first **R4** rafters using **RB1** brackets on the back of the shelter and **S1** stubs in the middle.

Step 3 Assemble the **T-frame** using two **ST9** tie bars and a **P4** post. Join the two **ST9** bars together first using **JF3** brackets, then attach the **P4** post using two **RB2** brackets.

Step 4 Use **L1** brackets to attach the T-bar to the front of the shelter and install the remaining **R4** rafters using **RB1** brackets on the rear and **L1** brackets at the front. Attach the **FT1** and **FT3** brackets and move the shelter in to its final position before using anchor bolts to secure it to the ground.

Step 5 Stick sealing strips (**SS**) to the rafters and align the **ACE2** panels to the outside of the shelter and centralise the **ACC2** panel in the centre.

Step 6 Screw down the **RC2** strips directly into the rafter with the **25mm TEC screws** to secure the roof panels. Then fit the Black plastic caps on exposed nuts and bolts. Fit the square end caps (**EC40**) to any open ends of box sections. Screw the **A2 Roof Angles** onto the back edge of the roof as shown below.

Notes:

PLAN VIEW
OVERALL DIMENSIONS AND GROUND FIXING POSITIONS

Suggested size for concrete base:
200mm / 7.87in oversized on all sides

THANK YOU FOR PURCHASING THIS PRODUCT

MAINTENANCE:

To ensure your product gives you many years of use we recommend that you:

- Clean panels regularly with soapy water
- Ensure all fittings are tight (for example after a big storm)
- Touch up any exposed metal should it get scratched
